Calibration and Measurement Capability (CMC) is expressed in terms of the measurement parameter, measurement range, expanded uncertainty of measurement and reference standard, method, and/or equipment. The expanded uncertainty of measurement is expressed as the standard uncertainty of the measurement multiplied by a coverage factor of 2 ($k=2$), corresponding to a confidence level of approximately 95%.

Notes:

1. On-site calibration service is available for this parameter, since on-site conditions are typically more variable than those in the laboratory, larger measurement uncertainties are expected on-site than what is reported on the accredited scope.
2. D = diagonal length in inches.
3. The uncertainty shown is for PF=1 at the frequencies shown. The laboratory can generate power at other power factors and frequencies. The reported uncertainty will increase. Contact laboratory for more information.
4. This scope is formatted as part of a single document including Certificate of Accreditation No. AC-1255.
